

Use of AI Technology in Our Practice

Our practice may use approved Artificial Intelligence (AI) tools to support the delivery of safe, efficient, and high-quality patient care.

What this means

AI may be used to assist with tasks such as:

- creating or organising clinical notes
- supporting administrative processes
- helping staff work more efficiently
- improving the accuracy and clarity of information

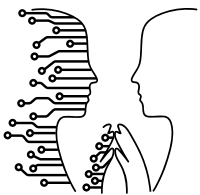

These tools simply support our team. Your clinician is always in control.

Your privacy and safety

Your confidentiality is extremely important to us. The AI tools used within the practice are:

- compliant with NHS guidance and Data Protection law
 - used under strict clinical oversight
- designed so that no recordings or sensitive information are stored without consent
- reviewed by staff before anything is added to your record

Your choice

If you have any questions or concerns about AI use, please speak to a member of the team. If you prefer not to have AI used during your consultation, please let your clinician know. We will respect your wishes.
